Safe and effective.

Safety and Reliability
- Single-use prefilled syringes help reduce medication errors and contamination risks associated with multi-dose vials
- Easy-to-read labels with NDC number barcoded symbology help caregivers quickly identify dose/solution type
- Needle-free design, eliminating potential for any needlestick injuries

Quality
- Terminally sterilized with a sterile fluid path
- Up to 2-year shelf life
- Not made with natural rubber latex
- Preservative free

Convenience
- Ready-to-use, prefilled and preassembled; no additional components to buy
- Barcoded with NDC number symbology for bedside scanning/inventory management

Why prefilled flush syringes?
**Patient Safety.** Healthcare entities such as JCAHO and ISMP focus on the reduction of medication errors related to non-labeled or mislabeled products.4 5

**Infection Control.** Studies show virtually 0% contamination rate for prefilled flush syringes manufactured by companies that utilize terminal sterilization.1,2,3

**Cost Reduction.** Prefilled syringes are less expensive than manually prepared syringes when all factors are included into the cost.
Why now?

Contaminated syringes have been shown to cause Catheter-Related Bloodstream Infections (CR-BSI).\(^6\)\(^7\)

CR-BSI is the most life-threatening of all healthcare-acquired infections, estimated to cost the healthcare system more than $2 billion annually.\(^2\)\(^6\)

Since 2008, legislation has required hospitals—not Medicare—to cover the costs associated with hospital-acquired conditions that could reasonably have been prevented. Conditions subject to this provision include catheter-associated bloodstream infections.\(^8\)

Why prefilled flush syringes from Cardinal Health?

- Our saline flush syringes are terminally sterilized.
- Syringes are specifically designed to minimize the amount of syringe generated reflux, thereby reducing the potential for catheter occlusion formation.
- A prominent syringe label emphasizes all relevant information to help promote proper flush administration and reduce medication error.

Ordering Information

Prefilled saline flush syringes

All units contain 0.9% Sodium Chloride, USP saline per mL sterile water and have white caps and labels. Terminally sterilized and not made with natural rubber latex.
