

Empowering supply chain excellence

ValueLink® is more than a low unit-of-measure (LUM) distribution model - ValueLink® delivers in logical units of measure, providing the ideal amount of product to the right place. The logic is backed up by data tailored specifically to your facility.

All ValueLink® customers have access to our ValueLink® Reporting Suite, which offers visibility into your supply chain and enables data-driven supply decisions. Learn how each ValueLink® tool delivers valuable, meaningful insights to improve your system's or facility's supply chain.

ValueLink® Scorecard

Define supply chain goals with data

It can be difficult to determine supply chain goals for a facility with diverse needs and challenges. By painting a full picture of current state and supply chain benchmarks, data can help your facility define goals, identify how you compare to other customers and reveal new opportunities.

- The ValueLink® Scorecard answers: How is my supply chain doing? How is our facility stacking up to other facilities? And where are opportunities to save time and money?
- This tool offers a snapshot of ValueLink® Key Performance Indicators (KPIs):
 - Percentage of total sales: ValueLink® sales as a percentage of your facility's total product sales from Cardinal Health
 - Percentage of total lines: ValueLink® line count as a percentage of your facility's total product line count from Cardinal Health
 - Number of SKUs: Count of SKUs purchased in ValueLink® vs. non-ValueLink® purchases
 - Micro-ordering percentage: Percentage of ValueLink® order lines \$5 or less
 - KPIs of other facilities of varying size

Benefits

- Identify specific supply chain metrics for your facility and track achievement toward goals
- Drive down costs by helping your facility optimize ValueLink® purchases
- Benchmark current ValueLink® usage against national averages and compare to best demonstrated practices from other facilities
- Obtain recommendations for achieving goals
- Combine with other ValueLink® Reporting Suite solutions

ValueLink® PAR Health Report

Prioritize your periodic automatic replenishment (PAR) levels

PAR levels are the expected amounts of inventory needed to meet end-user demand. The Joint Commission (JCAHO) requires facilities to have at least three days of a PAR on hand to meet the needs of an emergency or disaster situation. Establishing PAR levels and maintaining a healthy PAR portfolio are essential to an efficient supply chain.

- ValueLink® PAR Health Report answers: How can I understand and improve the overall health of the PARs at my facility?
- This tool provides your facility with:
 - Overall PAR health: Holistic view of facility's complete PAR portfolio and the most distressed PARs at your facility so that you can reprioritize by needs
 - PAR optimization insights: An interactive report to review PAR health by facility needs and days of inventory on hand (DIOH), volumetric data for each item, bin size recommendations and PAR level recommendations to help reprofile a room or set up a new PAR
 - Item health: Understand micro-ordering contribution to reduce micro-ordering to 20% and deliver tangible benefits to your facility's bottom line

Benefits

- Set PAR levels based on the average daily usage of your facility to help reduce or eliminate stock-outs
- Identify which items are ordered every three days or less at your facility
 - Note: Items ordered every three days or less are the biggest obstacle to skipping an ordering day and at highest risk for stock-out
- Know the financial impact of PAR level recommendations before making your final decision
- Make informed daily decisions with regular PAR level updates

Cardinal Health™ ValueLink® Reporting Suite

Base to ValueLink® Report

Optimize your distribution solutions

Identify where your facility can transition from base distribution to ValueLink® to reduce time and labor spent stocking and picking products and maximize your ValueLink® experience.

- Base to ValueLink® Reporting is for customers utilizing both base and ValueLink® distribution, helping supply chain leaders understand where their distribution model usage currently stands and suggesting where they could be
- Identify the number of SKUs that would most optimally be ordered via ValueLink®

Benefits

- Identify materials that can be moved from base to ValueLink®, generating reallocation of space and labor, and cost savings
- Eliminate the burden of managing your facility's SKUs; ValueLink® will manage the SKUs and pick, pack and ship them
- Let data drive ongoing conversion opportunities to maximize ValueLink® benefits

ValueLink® Pallet Optimization Report

Identify warehouse storage opportunities

Pallet placement and configuration can often be forgotten amid the myriad of responsibilities like receiving deliveries, tending to inventory and ensuring product gets to the right place at the right time. Analyze and reconfigure pallet space to save time and reduce warehouse inefficiencies.

- The Pallet Optimization Report pulls ValueLink® tote and product dimensions to identify areas to streamline your ValueLink® dock-to-stock process by optimizing department groupings
- With your approval, we can evaluate sortation and reconfigure pallets to optimize routes and palletization to ensure the best use of space (dock, hallway, etc.)

Benefits

- Review and assign department delivery groupings to enhance and streamline the dock-to-stock process
- Identify opportunities to level daily delivery volume to mitigate labor inefficiencies throughout the week
- Consolidate or reorganize current pallet structure to create space efficiencies
- Ensure the priority departments at your facility are in the most efficient position in your facility's staging area
- Reduce "mixed" pallet issues to ensure the right products get to the right departments

We are continuously creating new ways to ensure the ValueLink® LUM model employs data and analytics to provide visibility and reliably deliver the logical unit of measure in the optimal mode. Plus, you can count on your Cardinal Health sales representative to provide and help you act on the valuable insights within the ValueLink® Reporting Suite.
