

Cardinal Health™

Lab Briefings

**A P.A.C.E.® accredited webinar series
to empower and support laboratorians**

Lab Briefings is an educational archive intended to educate and empower laboratorians by providing them with clinical insights and up-to-date industry information as well as support and solutions from leading industry experts and opinion leaders in clinical laboratory science.

Our community of lab innovators share best practices and ideas shaping the diagnostics industry. You'll find webinars on today's hottest topics and techniques covering a variety of topics from test utilization to lab quality. Not only are these webinars available live, each webinar is easily accessible in our on-demand library.

Attend these basic level webinars at no cost. Cardinal Health is approved as a provider for continuing education programs in the clinical laboratory sciences by the ASCLS P.A.C.E.® Program.

Praise for Lab Briefings

"Very informative, eye-opening and enjoyable."

"One of the best webinars I've had the pleasure of listening to."

"Excellent webinar. I will be recommending to my colleagues."

"Valuable information, well-presented in a concise, informative manner."

"Excellent presentation of complicated compliance issues."

Cardinal Health™ Lab Briefings Webinar Series

Webinars cover a variety of topics impacting the laboratory industry, and are focused on one of the six themes below.

Laboratory Quality

Within the clinical laboratory, quality has multiple components. The most thought of components relate to inspections, accreditations, and ensuring staff and patient safety. Learn how quality management programs help laboratories deliver consistent, high quality test results.

Laboratory Data/Analytics

Clinical laboratories are swimming in data that can provide actionable insights to help achieve performance goals. Learn what opportunities exist for laboratorians to utilize the data generated in their laboratories to educate providers, care teams and patients which positively impacts patient care.

Laboratory Management

Laboratory testing plays a central role in healthcare delivery that impacts both costs and outcomes. In today's environment, labs must demonstrate quantifiable value well beyond the delivery of test results. Learn how active engagement with clinicians can support optimal test utilization and begin the transition from cost to value center.

Regulatory and Compliance

Clinical laboratories are operating in increasingly complex and competitive environments as healthcare reform continues to evolve. Learn how understanding regulatory and compliance requirements can enable laboratories to identify and avoid associated risks.

Reimbursement

The ever-evolving rates and fee schedules for clinical lab testing created challenges and opportunities for clinical labs. Learn how navigating reimbursement changes while still providing quality care will become a necessity in order to survive.

Test Utilization

The utilization of laboratory services is of constant concern as the nation's healthcare system shifts from fee-for-service to fee-for-value and patient-centered models. Learn how successful laboratory test utilization programs involve partnering with providers in the development of test plans and protocols while keeping patient outcomes top of mind.
