

Simplify your procedural supply chain.

In a fast-paced environment, get the products you need, when you need them.

CardinalHealth™
Presource®

Getting the right products at the right time into surgical cases is a labor-intensive process.

Think about the touchpoints — the number of times products are handled from receiving all the way through case setup — before your patient arrives.

Reduce touchpoints and improve efficiency with a streamlined procedural supply chain solution — **Procedure-Based Delivery Systems (PBDS®).**

Receiving

Work faster and smarter.

Every box is scanned and handled swiftly with care.

Consolidate the number of items ordered and received to improve efficiency and cut down on products to handle and store.

Case pick

Feel confident.

High-volume, complex procedures require numerous products to be pulled for a case. Streamline your picking process.

Consolidate the single use supplies used for pre-, intra- and post-operative care into one procedural supply module. Reduce your touchpoints and lessen case pick errors and headache.

Case setup

Minimize steps.

Set up cases with all of your single-use products in one place. Rather than hunting for supplies, let patient care be your focus.

Room turnover and waste removal

Be ready.

Every surgical minute costs money.

Get the most from your team and time.

Fewer products to pull and open, less packaging to waste.

See what PBDS® can do for you.

PBDS® is more than a surgical pack. It's a solution that reliably delivers exactly what is needed, all the way through to the point of care.

Through the combination of both sterile and non-sterile supplies, along with the use of our interactive, custom kitting tool PackManager®, you can find improved labor efficiencies, standardization and utilization and case pick quality.

Let our team of surgical pack experts help you choose the optimal way to receive your supplies to prepare for your surgical cases. Focus on what you do best — care for patients.

Cardinal Health™ Presource® Products and Services provides relief via insight-driven solutions that empower healthcare providers to take control of their surgical supply chain and clinical practice.

Redefining value

Our surgical kitting services enable efficient, data-based optimization of custom procedure pack programs help customers maximize value of your resources throughout the delivery of care.

To the point (of care)

Count on our scale and expertise to reliably meet your custom procedural kitting needs.

Meeting demands every day

Backed by deep data and tenure, our custom procedural and surgical kitting solutions help customers optimize the delivery of high-quality care.
