

The Kendall DL™ Lead Wire System

Make a positive impact on the environment and your budget.

The Kendall DL™ lead wire system is more than just a cable and lead wire system to us. It's a promise to protect patients, to protect the environment and to protect your bottom line. As the manufacturer that's also a reprocessor, we strive to give you everything you need today to see sustained success tomorrow. That's The Kendall DL™ lead wire system.

The problem with most reprocessors

Many limit the amount of products you can buy, leave your supply chain inconsistent and require different SKUs for the same product. That's why it pays to partner with a reprocessor that's also an OEM and a logistics provider.

National yield averages are 40%, so most hospitals miss out on 60% of the value of reprocessing*

Reprocessing with Cardinal Health means

Consistent value

Our blended-pricing model delivers a mix of new and reprocessed product.

Committed inventory

No need to monitor what is collected or what can be purchased since we are an OEM and reprocessing company.

OEM sales support & service

New and reprocessed products have one point of contact for seamless service.

Like-new quality

As the OEM, we know The Kendall DL™ lead wire system best. That means our reprocessed products meet the same rigid quality standards as our new products.

Reduced waste

Reprocessing protects the environment and means collection services can match hospital needs without disrupting patient care.

helps guarantee
SUPPLY

602K
pounds of medical waste
diverted in 2017 alone*
