Take a fresh look at our unmatched portfolio of synthetic surgical gloves. Whether you’re looking for state-of-the-art protection, more sensitivity, better control, greater comfort—or all four—you’ll find the perfect fit right here.

Up to 17% of healthcare workers are affected by latex sensitivity.

A recent survey of healthcare professionals showed:

- 63% reported an increase in latex reactions at their facility over the past 5 years.
- 96% believe eliminating latex surgical gloves from the OR will produce a safer environment for patients and staff.
- >20% have known an OR colleague who was unable to perform work duties due to a latex reaction.

NOW IS THE TIME TO SWITCH

US latex surgical gloves are on the decline.

2/3 of hospitals are already talking about removing latex gloves from the OR entirely.

And, one facility decreased operating costs by 25% by removing latex from their OR.
