

Technology implementations, like CPOE, is often met with inadequate staff support, and this challenge increases post-CPOE because anticipated efficiencies don't become reality

Post-CPOE order volume

increases by an average of 30%¹

Implementation requires

24 hours
of training per pharmacy staff

For the day of cutover, up to an

**additional 40%
of current staff**

is needed to input patient orders into the new CPOE

A hospital in a CPOE transition needed an additional

37 FTEs
just to get through the cutover in less than 24 hours

LEVERAGE REMOTE WORKFORCE AS A TECHNOLOGY ENABLER

A remote supplemental workforce solution

manages successful technology and CPOE transitions by balancing the workload during pre- and post-implementation of projects

How are you aligning your workforce with the anticipated workload

today to allow staff to maintain clinical initiatives and enhance patient care?
